

# Community Bed

## Multiple Positioning and Reduced Shear

The BetterLiving Community Bed is incredibly practical yet versatile bed to suit a range of home care needs. Operates as a four part, profiling bed with electric high-low height adjustment, back rest, knee break and Trendelenburg tilt – to deliver multiple positioning options to suit every need.

The Auto Contour feature simultaneously raises both the head and knees, which combined with auto-regressive backrest helps prevent painful skin shearing.

## Quality Design

Powered by a high quality Linak electric drive and constructed from durable powder coated steel. The frame includes a 200mm Length Extension and removable mattress retainers.

Designed with built-in storage features for the Length Extension and Transport Bracket which minimises misplacement when not in use.

Fitted with four high quality individually lockable castors for easy maneuverability.

## Easy, Safe Operation

Lightweight, water resistant hand controller with soft touch buttons for raising, lowering and positioning, including one touch auto contouring.

Convenient inbuilt hanging hook for easy storage and access. Features lockout function, ideal for patients incapable of operating the bed due to cognitive impairment.

Each function can be individually locked out using the key, which is required to unlock and reactivate functionality.
